## Step 1 — Checkpoint: It's Alive!

## Step 2

### Step 3

⚠ Make sure the **power switch is in OFF** position.

### Step 4

## Step 5

## Step 6

**⚠ Make sure the area around your LCD controller is clear of tools or other metal objects as these might connect the exposed pins in the back and destroy your LCD.**

- (Don't worry, there's no danger to you.)

## Step 7

## Step 8

- Turn the JellyBOX on for the first time. This is a historic moment.
- ⚠ Be ready to turn it off immediately if anything does not go as planned.
- ⚠ If you smell any hint of smoke from the electronics, turn off!

## Step 9

- [It's alive!](#)

⚠ If the LCD does not light up, please [contact our support team](#).

## Step 10

- Let loose a little victory dance.

## Step 11 — It's alive! Now let's move on...

- 1. Turn off you JellyBOX
- 2. Unplug the power supply
- 3. Disconnect and stow away the LCD controller and wires
- This will make the rest of your build more enjoyable :-)
